

807 | Nexa | Remote Power | Adjustable T-Bar Clip

Please read instructions in their entirety before proceeding with any part of the installation. This product must be installed in accordance with the applicable installation code by a person familiar with the construction and operation of the product and the hazards involved. Consult a qualified electrician to ensure correct branch circuit rating. To prevent electric shock, disconnect all power before installing or servicing product. Rated for use in dry and damp locations only. Retain instructions for future reference.

Installed View

Clip Preparation

Step 1: Loosen Clips and Adjust

First loosen the wing nut and screw. Then shift to the middle of the clips. Slide front clip up and down to desired height. Align the slots to the appropriate setting. Contact Vode with gird and suspended ceiling specifications, or test fit one clip in order to determine correct setting.

NOTE: Adjustable clip system allows for easy selection of rail height between grille fins. Each "R to R" setting is 1/4" apart. Each "R to L" setting is 1/8" apart.

Step 2: Select Length

Shift the wing nut and screw in the direction of the selected setting. Ensure clips are aligned and tighten the wing nut and screw together.

NOTE: In high vibration areas consider installing nut and screw using permanent thread locker (red), causing a permanent connection at chosen height.

Fixture Installation

Step 1: Install Clips

Using the prepped clips, hook over installed ceiling grid. Be sure to place clips in alignment with pre-installed ferrous backers on the fixture. Rails are provided with 2 clips per 24" - 60" fixtures and 3 clips per 72" - 96" fixture.

Once clips are in place, use a sheet metal screw, *provided by others*, to secure to grid.

NOTE: If necessary, rail ferrous plates can be adjusted to align better with clip placement on grid. This can be done by loosening both set screws and sliding the plate.

Step 2: Attach Fixture

After clips are securely installed, attach fixture using clip magnets.

Attach power using provided wire harness and power supply and turn fixture on.

Install Remote Brick Power Supply

IMPORTANT! Before any installing power supply, turn off electricity at circuit box.

NOTE: Vode Brick style driver mounting plate is designed to mount only to 4" Square metal j-boxes with a minimum volume of 21 cu. in. Mounting plate contains important installation labeling, please consult to ensure correct driver is installed with correct corresponding rail.

Install j-box (*provided by others*) to desired surface using screws (*provided by others*). Run line, ground and neutral wiring and any applicable dimming controls into j-box through knockout and secure in place, using conduit as necessary per local coding. Use wire nuts (*provided by others*) to make a secure connection between all wiring. (*The provided wire leads are 18 AWG solid core*).

DO NOT power on system until instructed.

For remote power supply maximum distance or wiring questions, please consult **Vode Remote Power Guide**.

NOTE: If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

Max Remote Driver Distance

Driver	Remote Distance
eldoLED	100' (30.5 m)
Lutron	See Vode Power Guide

For other wiring questions and driver specific information, see **Vode Remote Power Guide**.

Example Only
See Vode Remote Power Guide for wiring detail.

Install Remote Linear Power Supply

IMPORTANT! Before installing any power supply, turn off electricity at circuit box.

Vode recommends keeping track of which lids comes with which housing, as the lid contains important installation labeling.

Using the indicated tab, remove power housing lid to access mounting points. Install power supply housing to desired surface using screws (*provided by others*). Run line, ground and neutral wiring and any applicable dimming controls into power housing through any provided knockout and secure in place, using conduit as necessary per local coding. Use wire nuts (*provided by others*) to make a secure connection between all wiring. (*The provided wire leads are 18 AWG solid core*).

DO NOT power on system until instructed.

For remote power supply maximum distance or other wiring questions, please consult Vode Power Guide.

NOTE: If power housing is supplied pre-wired with cord and plug and wire harness installed, skip above steps and power system when instructed by plugging system into a standard outlet.

Remote Driver Distance

All Vode linear remote drivers come in a 0.054" (1.4 mm) formed galvanized steel power supply housing with five (5) knockouts: (4) 1-1/8", (1) 7/8" and (1) 9/16". Power supply housing dimensions: 2 3/8" (56 mm) x 1 5/8" (33 mm) x 20 1/16" (525 mm)

Driver	Remote Distance
eldoLED	100' (30.5 m)
OSRAM	100' (30.5 m)
Magnitude	100' (30.5 m)
Lutron	See Power Guide

For other wiring questions and driver specific information, see **Vode Remote Power Guide**.

Example Only
See Vode Remote Power Guide for wiring detail.

Trouble Shooting Guide

My fixture will not turn on:

Check all wiring is correct and all connections are fastened properly.

If all wiring is correct, remove fixture and connect it to a known working driver.

If the fixture lights up, then the problem is with the installed driver or wiring:

- 1) Check line voltage to driver is present.
- 2) Check driver wiring (see **Vode Power Guide for details**) and check wiring to fixture.
- 3) Check driver and dimming system are compatible (see **Vode Power Guide and the dimmer manufacturer's website**).

If fixture still doesn't light up, check that all dimming wires are installed correctly. Reversed polarity on any driver will cause the entire system to not work, (see **Vode Power Guide for wiring details**).

The fixture is not dimming properly:

Check all wiring is correct and all connections are fastened properly.

Check driver wiring (see **Vode Power Guide for details**). Make sure driver is compatible with dimming controls (see **Vode Power Guide and the dimmer manufacturer's website**).

For any help with installation or technical information, contact Vode Tech Service at 707-996-9898.

Important Notes

- Listed to UL standards for damp location by a Nationally Recognized Testing Laboratory (NRTL) recognized by OSHA
- Power Type: Class 2 (<60v) constant current driver.
- Dimming curve is factory preset to linear. Logarithmic is available upon request. See Vode Driver Guide for specific details and wiring diagram.
- Unless specified, one driver per rail will be supplied.
- 5 Year Limited Warranty. All material and component parts manufactured by Vode are guaranteed to be free from defects of material and/or workmanship for a period of 5 years from date of sale. Product must be installed according to Vode installation instructions and accepted trade practices. Power supplies and other auxiliary equipment are not covered under Vode warranty but may be covered by separate OEM warranty.
